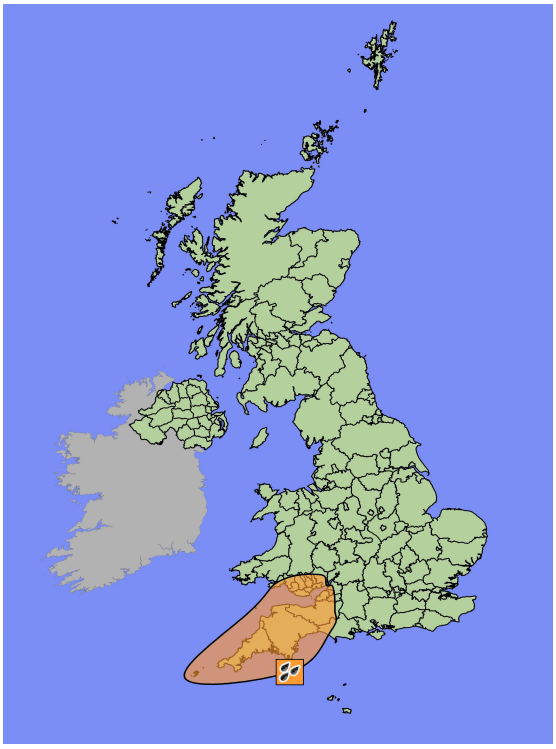
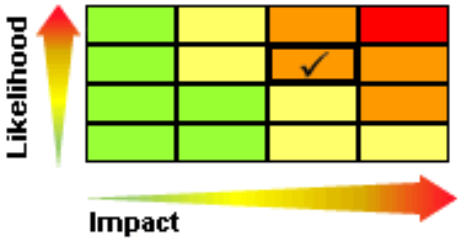
National Severe Weather Warning Service





Chief Forecasters Assessment
A deepening depression is heading towards the UK from the southwest. The path taken by this feature is important for determining the distribution of strong winds and heavy rain, and some uncertainties still remain even at this late stage. However, it looks likely that than 30-40 mm will fall in many places across the region indicated, with the risk of 50-60 mm over parts of Devon, Cornwall and the Isles of Scilly. In addition there is the risk of gales or severe gales in exposed locations for a time during the evening.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **11:00 on Sat, 24th Nov 2012** until **23:59 on Sat, 24th Nov 2012**

Further persistent rain will spread across the area on Saturday, turning heavy at times, especially during the evening. Given high existing levels of saturation, the public should be prepared for local flooding.
